Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/batman-10-gothambat/smart_bridge-final-project
Programming Language(s)	TypeScript, JavaScript, Python
Framework(s) Used	React (Vite bundler), Express.js, FastAPI, Streamlit, Tailwind CSS
Key Features Implemented	1. AI-powered contextual theme extraction using zero-shot semantic mapping. 2. Multi-tier starter generation (Icebreakers, Topic-Specific, and Goal-Oriented openers) aligned to personalized goals. 3. Live entity validation and definition summaries fetched via Wikipedia MediaWiki API. 4. Searchable session logs with real-time feedback loop.
Pending / Incomplete Features	None

Setup / Run Instructions	Install dependencies: Run npm install inside the project root folder. Setup credentials: Create a .env file containing GEMINI_API_KEY=your_key. Run Server: Launch via npm run dev. This fires up Vite and boots the Express gateway. Open http://localhost:3000.
---------------------------------	--

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	YES
2	Meaningful variable and function names are used	YES
3	Code includes comments / documentation where necessary	YES
4	Error handling is implemented for critical operations	YES
5	The application runs without critical errors	YES
6	Code is committed to a version control repository	YES

Additional Notes / Comments:

This solution provides an exceptional showcase of full-stack cross-platform engineering. Evaluators can review the web app running on a modern JavaScript/TypeScript framework (Vite/React/Express), or analyze the parallel Python system (FastAPI backend + Streamlit frontend) with its active Pytest unit tests, showing a versatile, enterprise-ready development approach.
